

Using Data to Drive Business Performance

Intro Databases

A digital-first MIS textbook centered on data, systems, and business performance

Nim Dvir, PhD

About the Author

Nimrod (Nim) Dvir, PhD
Visiting Assistant Professor
Information Systems & Business Analytics
University at Albany, SUNY (AACSB-accredited)

- PhD training: **6 years**
- Teaching experience: **5+ years**
- **4,000+ students taught**
- **25+ courses deliveries** (multiple formats)
- Experience with **Cengage, Pearson, McGraw-Hill**

The Persistent Problem

What instructors and say:

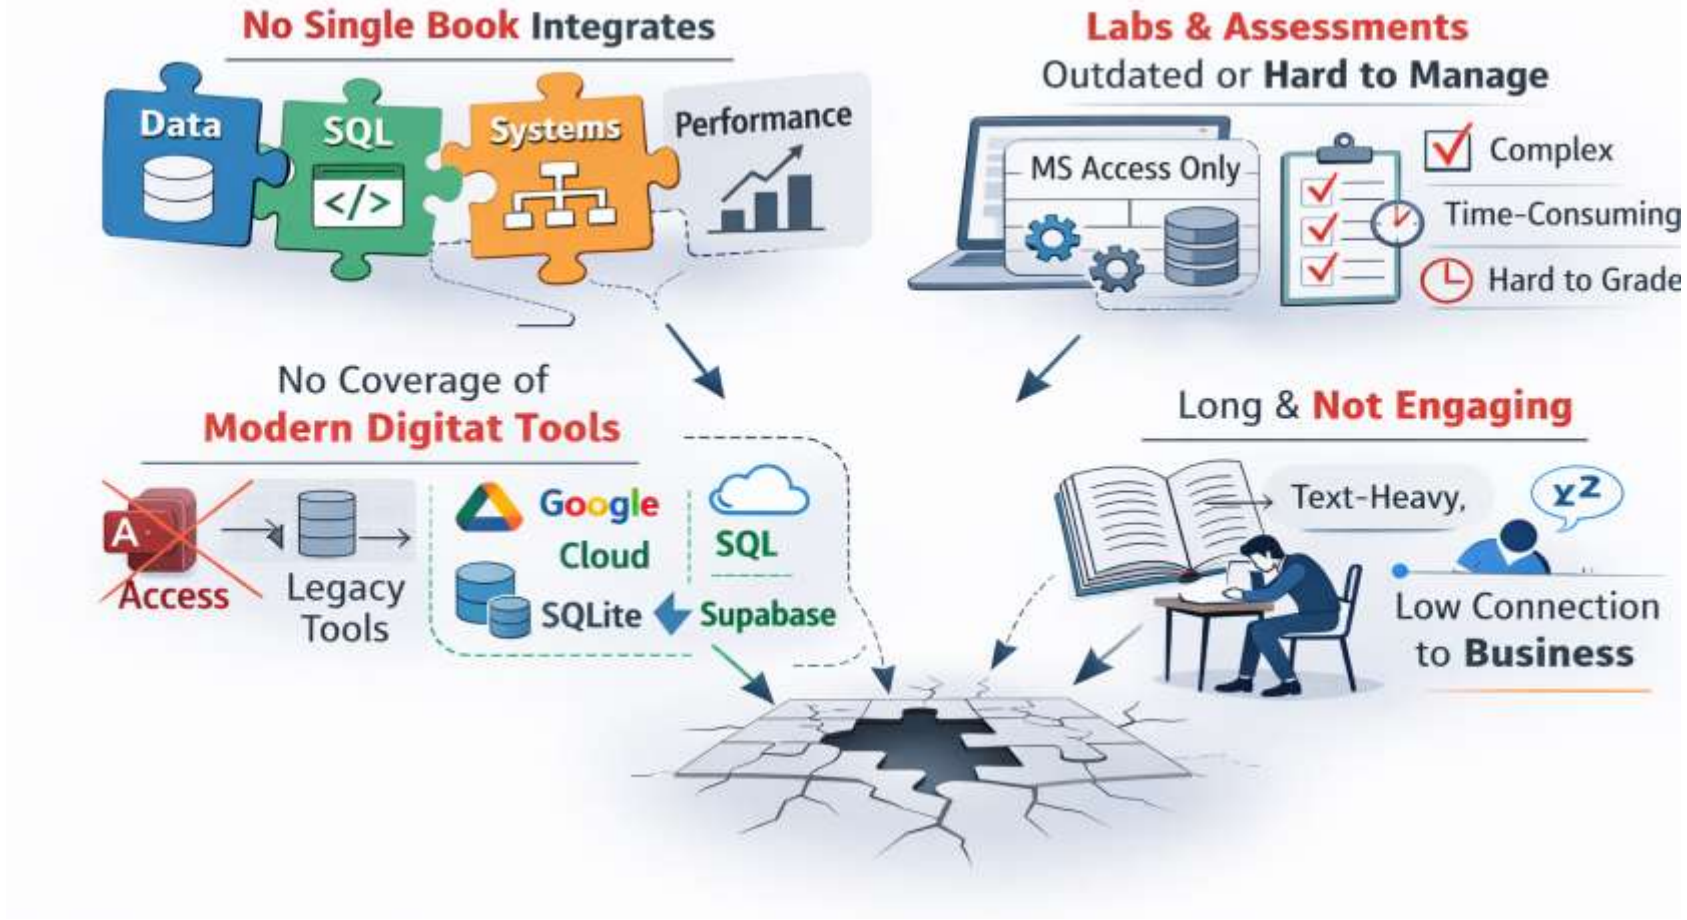

- No single book integrates **data, SQL, systems, and performance**
- Labs and assessments are **outdated or hard to manage**
- **No coverage of updated digital tools**
- **Long and not engaging**

What students say:

- "I understand the terms, but not how they connect."
- "We learn SQL, but I don't know why it matters."
- "Databases feel intimidating."

No Single Book Integrates
Data
SQL
Systems
Performance
Labs & Assessments
Outdated or Hard to Manage
MS Access Only
Complex
Time-Consuming
Hard to Grade
No Coverage of
Modern Digitat Tools
Access
Legacy Tools
Google Cloud
SQL
SQLite
Supabase
Long & Not Engaging
Text-Heavy,
Low Connection to Business

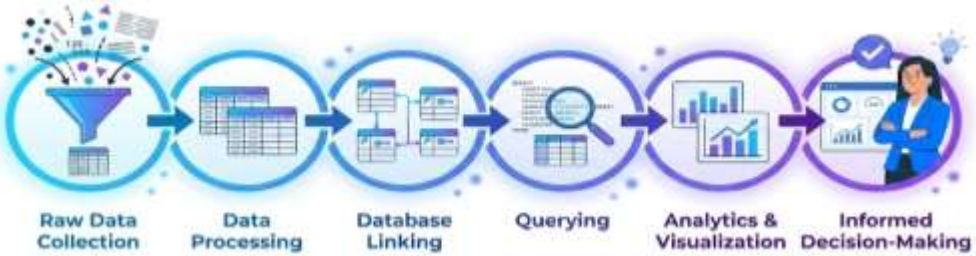

Market Reality

- **Business is the #1 undergraduate major** in the U.S.
- **~375,000 business degrees/year**; **~1,800** institutions
- **~300,000–400,000 students/year** in intro MIS-type courses
- These courses are **required, high-enrollment, every semester**

Even modest adoption scales quickly in a recurring, structural market.

How This Book Is Different

One continuous system narrative:

This book doesn't just teach databases.
It teaches students how data systems shape business performance — and gives them the confidence to build, analyze, and evaluate those systems.

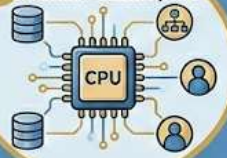

TEXTBOOK COURSE ROADMAP

Part 1: Foundations and Philosophy

1 **Chapter 1:** Introduction to the Textbook

2 **Chapter 2:** Foundations of Information Systems

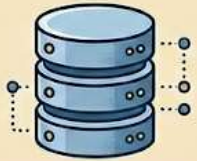

3 **Chapter 3:** Understanding Data Fundamentals

Part 2: Database Fundamentals and SQL

4 **Chapter 4:** Introduction to Databases

5 **Chapter 5:** SQL -- The Language of Databases

Part 3: Relational Design and Modeling

6 **Chapter 6:** The Relational Model

Customer ID	Name
101	Name
102	Name
103	Customers
104	Parimns
105	John

Customer ID	Name
101	Emmy
102	Charian
123	Farnes
124	John

7 **Chapter 7:** Data Normalization

Customer ID	Name	Name
101	Rox	Name
102	Rox	Name
103	Rov	Cuetomers
104	Key	Parinns
105	Key	John

COURSE PLAN

Consistent chapter anatomy:

- Conceptual framing (business relevance first)
- Follows **Bloom's Taxonomy**
  - Remember, Understand, Apply, Analyze and Evaluate
- Guided *"Let's Build"* project – Grading Database
- Reflection, quizzes, and labs tied to the same system – PetVax Animal Hospital

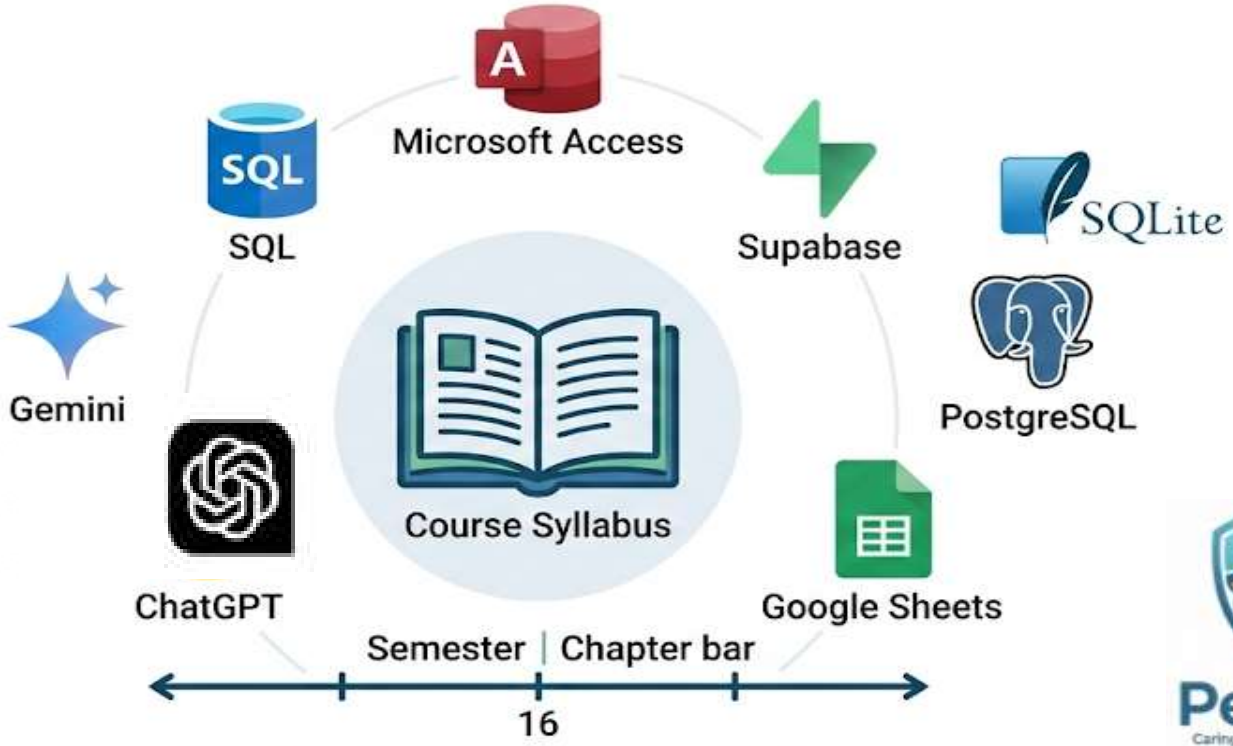

Tools, Design, and Fit

Grading Database PROJECT

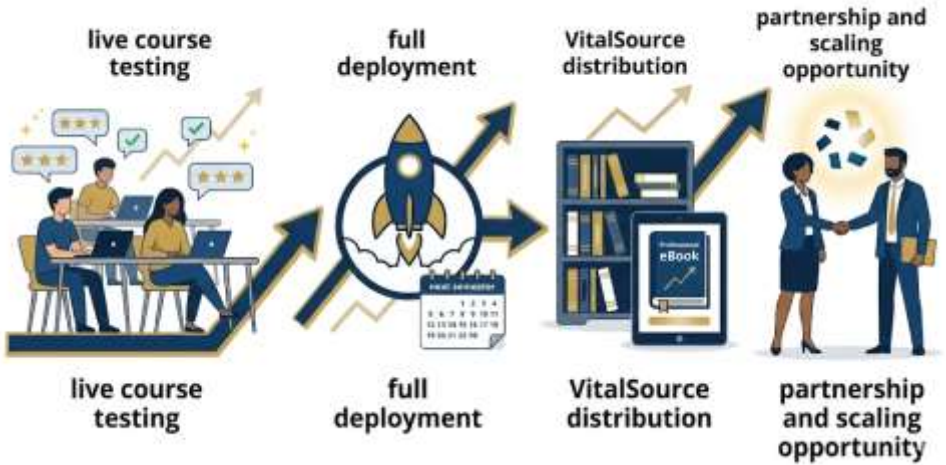

PetVax
Caring for your furry family

HTML EPUB PDF DOCX

Validation & What's Next

- Portions already tested in live courses
- Strong qualitative student feedback
- Full deployment next semester
- Planned delivery via **VitalSource**

I'd love to collaborate on scaling this.

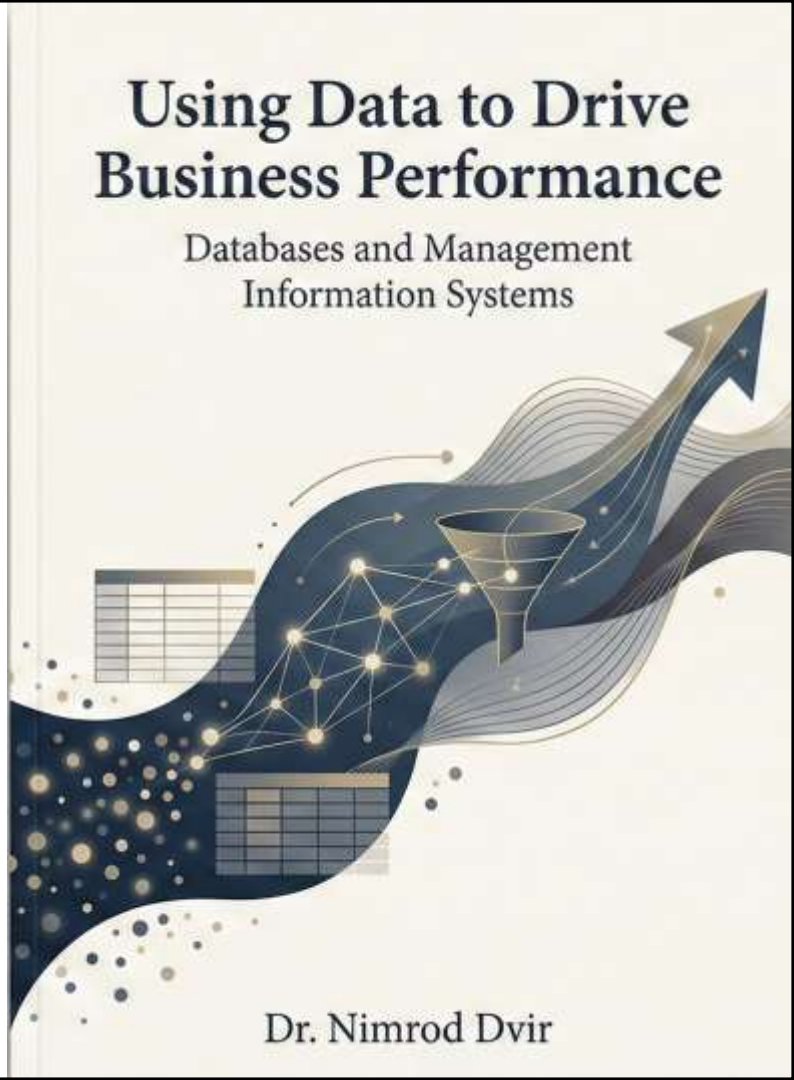

Closing

We don’t need another MIS textbook

We need one that shows students how data becomes performance.

This book does that — clearly, structurally, and at scale.

Thank you.
