PUBLISHER ACQUISITION DASHBOARD

BITM 330: Data to Decisions

The business-first database textbook that turns messy data into strategic wisdom. Designed for modern EdTech platforms and every major in the business school.

+300% TAM

Massive Addressable Market

Explicitly targets Accounting, Finance, Marketing, and Management students, not just MIS.

LOW DEV COST

EdTech & Platform Ready

Every chapter strictly follows a 6-component package. Predictable, scalable production costs.

FUTURE-PROOF

Earned AI Integration

AI isn't a decorative add-on. It's taught as a consumer of well-structured data (Supabase, RAG).

HIGH ROI

Career & Strategy Focus

Turns students into strategists. Teaches data-driven memos and resume translation for jobs.

Unlocking the Entire Business School

Unlike standard DB books targeting only MIS/CS students, this book maps directly to every business major's needs:

- **Bus. Analytics:** The full ETL and reporting pipeline
- **Accounting:** Ledgers as tables, audit trails as constraints
- **Finance/FinTech:** ACID, transactions, time-series data
- **Marketing:** CRM schema, segmentation, attribution
- **Cybersecurity:** Least privilege, RLS, audit logs
- **Management:** KPIs, scorecards, dashboard interpretation

Scalable EdTech Production

The strict "Chapter-Package Rule" ensures zero production surprises. Every chapter includes:

1. **Core Concepts**
2. **Let's Build (Guided Build with Grading DB)**
3. **Review Questions**
4. **Terms Treasury (Vocabulary)**
5. **RAT (Reading Assessment Test / Quiz)**
6. **Lab (Transfer skill to PetVax)**

Perfect for predictable LMS import and scalable content development.

Why this book wins the adoption war

Competitors teach databases as isolated software technical manuals. This book teaches databases as **Business Infrastructure**. By ending with business strategy (CH13), AI integration (CH14), and career portfolio translation (CH16), it becomes a high-value asset students keep for job interviews, rather than sell back at semester's end.

Data → Tables → Relationships → Queries → Analytics → Decisions

Content & Architecture

Phase 1: Using Inherited Databases (Ch 01-08)

01 Introduction & Course Journey
02 Foundations of Information Systems
03 Understanding Data Fundamentals
04 Introduction to Databases
05 SQL Foundations
06 The Relational Model
07 Data Normalization
08 Midterm Integration Studio

Phase 2: Designing & Leading Systems (Ch 09-16)

09 Database Design and ER Modeling
10 Advanced SQL for Business Analysis
11 DB Administration & Adv. Techniques
12 BI, Visualization, and Reporting
13 Strategy, Judgment & Decision-Making
14 Cloud, AI, Big Data & Ecosystems
15 Final Project & Assessment
16 Careers and Closing Reflections
