Strategic Market Analysis

A NEW ERA FOR MIS DATABASE EDUCATION

The landscape of Management Information Systems (MIS) is shifting from monolithic relational theory toward cloud-native, applied environments. Modern business graduates must move beyond "understanding" data to "building" solutions. This analysis defines the opportunity for a textbook that bridges the gap between deep theory and programmatic business application using Access, VBA, and SQL.

Rising Demand in MIS

Data from AACSB highlights a 5.7% growth in business school enrollments since 2020, with a significant resurgence in "career-aligned" technical skills like database management and business analytics.

Key Takeaway: The market for IS-specific learning materials is expanding alongside the corporate need for data-literate managers.

Competitive Analysis

Comparing the proposed text against industry standard incumbents. While legacy texts excel in theory, they fail to provide the integrated "full-stack" application development necessary for modern courses.

Key Takeaway: Existing texts force instructors to use "Theory" and "Manual" supplements; our text consolidates both.

The Curriculum "Bridge"

Traditional pedagogy separates theory from practice. The Database textbook model integrates these into a single narrative flow, moving from logical modeling to automated business performance.

Phase 1
Conceptual Design & Normalization
Phase 2
SQL Mastery & Query Optimization
Phase 3
VBA & Programmatic Automation
Phase 4
Improving Business Performance

Total Addressable Market

Quantifying the opportunity: 1,077 AACSB institutions globally, with over 350 domestic premium targets offering IS majors.

- 64% AACSB Institutions with IS Major
- 36% Other Business Programs

Key Takeaway: 64% of AACSB schools maintain a dedicated IS concentration, representing a massive capture opportunity.

Institutional Benchmarking

Peer institutions validate the need for a curriculum that moves from logical design to physical application.

SUNY Binghamton: Relational model & procedural languages.

Baruch College: Transaction processing & ER Modeling.

SUNY Buffalo: Prototype development & CRM integration.

The Unique Selling Proposition

By eliminating the "Theory vs. Manual" dichotomy, our textbook offers a **Turnkey Solution** for faculty. It provides cost consolidation for students and resume-ready skills (VBA/SQL) that align with AACSB's mandate for **Societal Impact** and **Workforce Readiness**.

350+ Targeted Domestic Institutions
