MIS Market Analysis 2025

The Strategic Opportunity

As institutions move toward career-aligned, skills-based programming to meet AACSB standards, the demand for integrated database application skills is reaching a critical inflection point.

1,077

GLOBAL AACSB SCHOOLS

The total addressable institutional market for premium MIS content.

64%

IS CONCENTRATION RATE

Proportion of schools maintaining dedicated Information Systems majors.

+5.7%

ENROLLMENT GROWTH

Resurgence in business enrollment driven by data-literacy needs.

The "Full-Stack Business" Bridge

The proposed textbook eliminates the dichotomy between theory and practice. Below is the mapping of core database concepts to high-impact business applications.

DESIGN THEORY

Relational Logic & ERD

Beyond modeling: Using business rules to drive inventory integrity and eliminate data anomalies (3NF).

LOGIC & AUTOMATION

VBA Programming

Creating custom front-ends and automated workflows to improve departmental performance.

DATA INTERROGATION

Advanced SQL

Mastering DDL/DML and complex joins to provide actionable intelligence for managerial decisions.

Why the B ITM 330 Model Disrupts?

- **Single Narrative:** No more switching between theory books and software lab manuals.
- **VBA Integration:** Teaching students to build programmatic business logic, not just store records.
- **Turnkey for Adjuncts:** Comprehensive datasets and solution files for accelerated delivery.

"Modern MIS graduates are no longer passive users; they are citizen developers using SQL and VBA to architect departmental solutions."

Competitive Analysis

A comparative audit of legacy incumbents versus the proposed text. While existing books focus on enterprise theory, they fail to deliver the granular, software-specific programming skills required by business students.

Legacy Texts (Coronel / Hoffer)

Strong in theory, but forces students into an 800-page academic tome. Lacks integrated application dev exercises.

Concepts Texts (Kroenke)

Flexible and cloud-aware, but provides only shallow coverage of VBA and custom business logic automation.

B ITM 330 Proposed Text

Bridges the gap by treating SQL and VBA as primary tools for performance improvement, eliminating the need for secondary manuals.
